
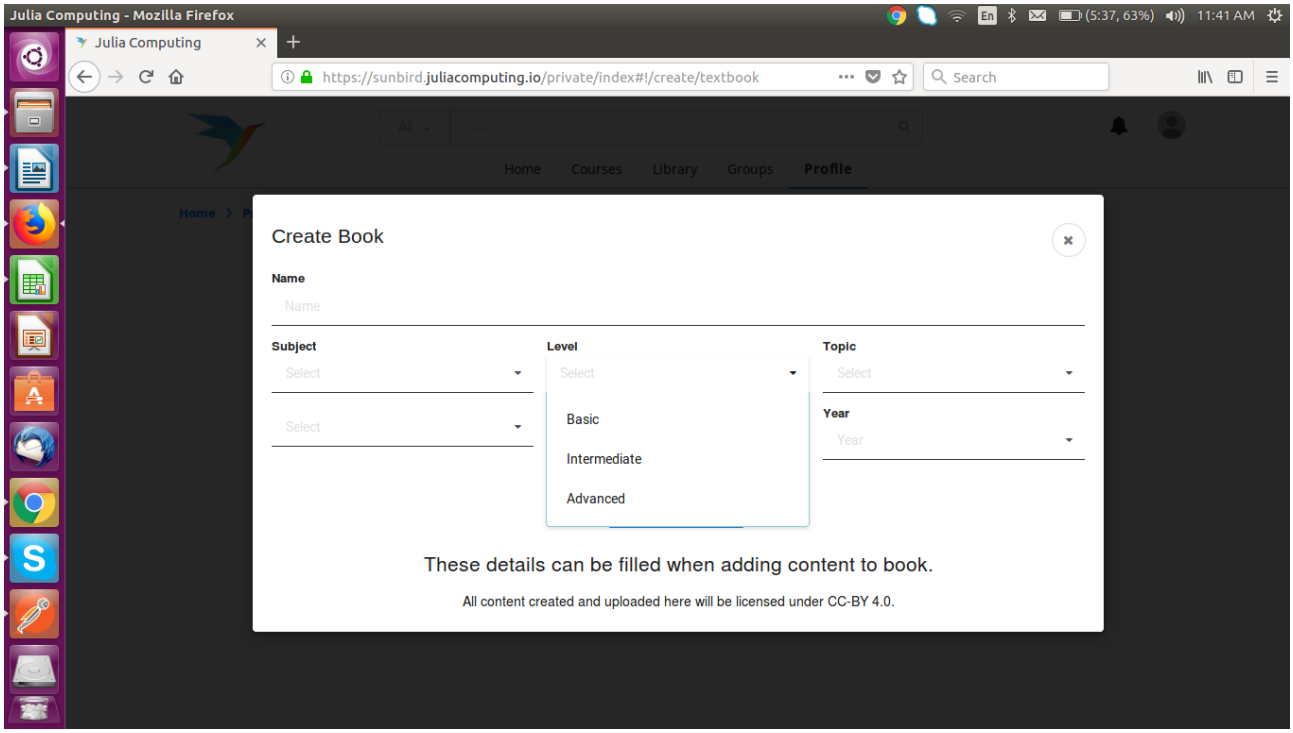
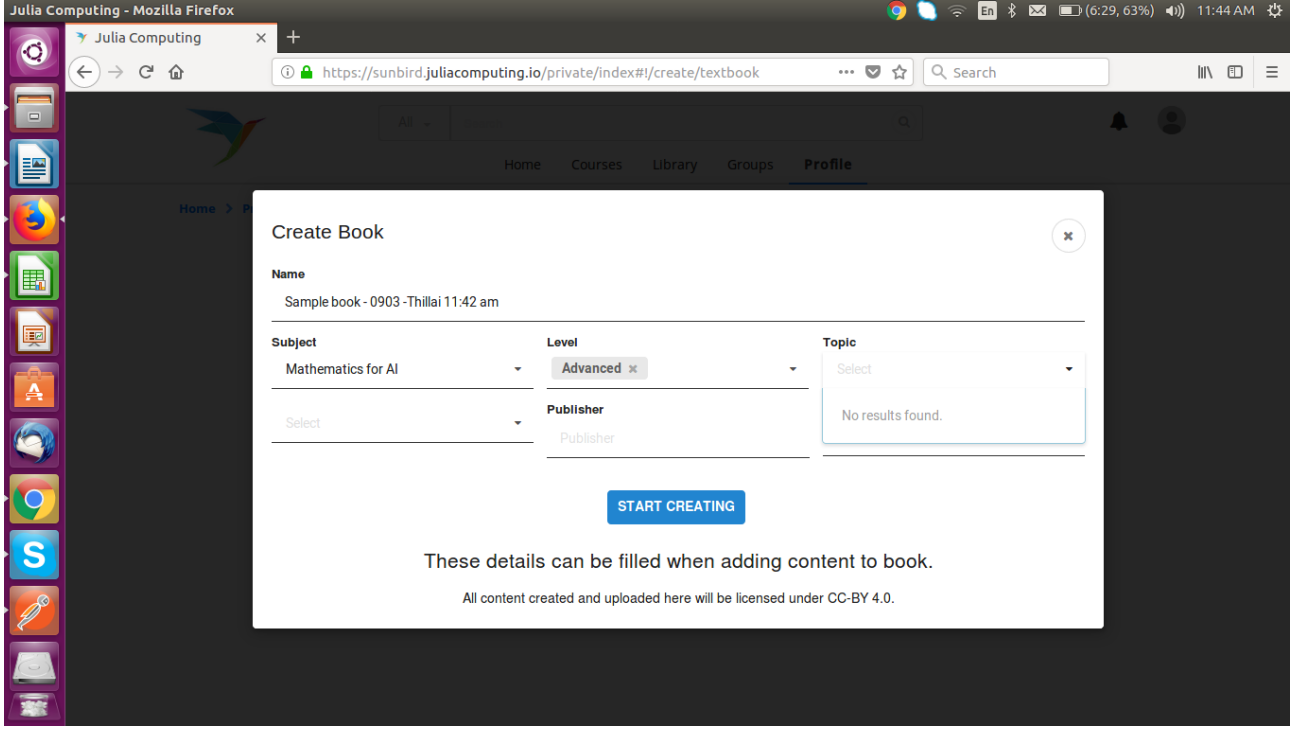
Create book – allows us to select the new category for atl, but for some reason there is repetition inthe drop down





When i click publish of the book created, it opens the edit details window and asks for the below details to be updated

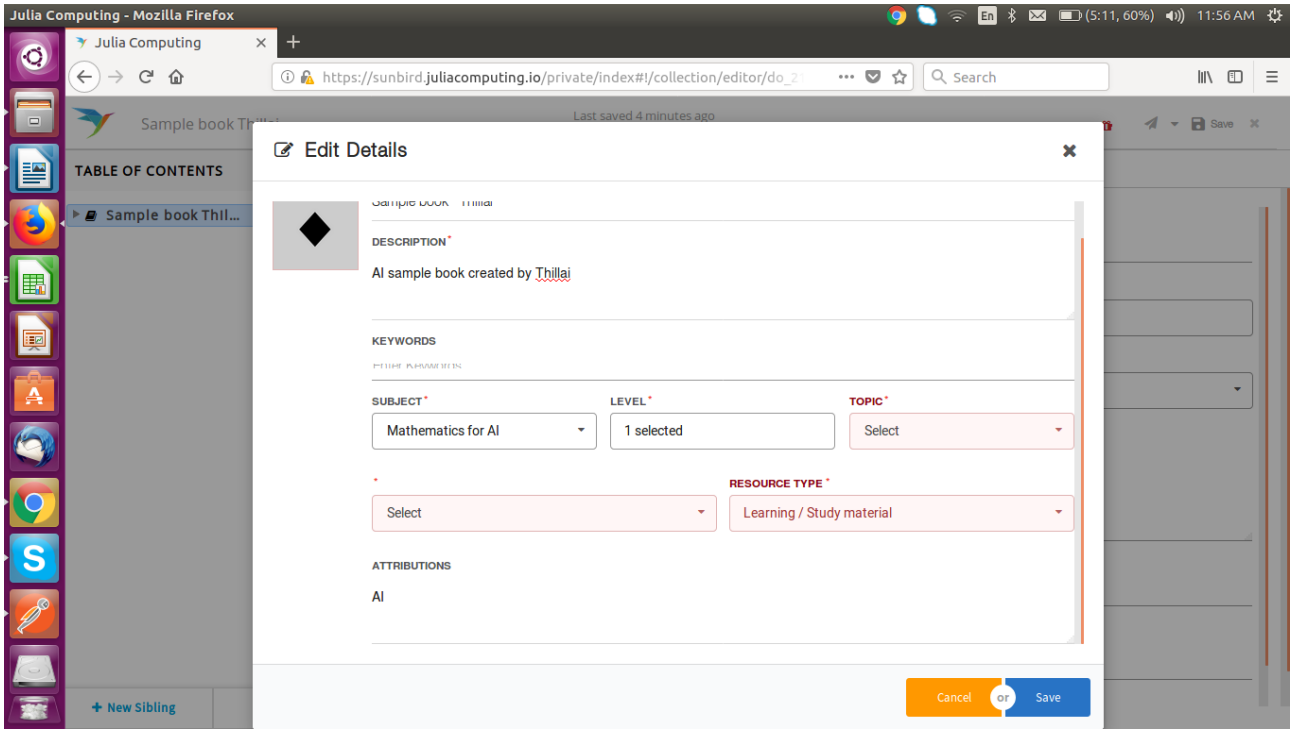
When trying to save the book, the application asks for few mandatory fields which are coming as blanks(topic and the other field)



and it doesnt allow us to save without these mandatory fields. After clicking cancel in the above window, i just clicked save in the top right corner. Now its saved as drafts.

Tried editing the book from drafts – all the drop downs are pointing to old framework now, whatever is initially selected has disappeared.
